

Building Technology

Engineering Mathematics II for Building Technology

Assignment 1

Instructions: Answer all questions. Show formula, substitution, calculation, units and technical interpretation.

Section A: Formula and Concept Questions

1. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\frac{dy}{dx} = f'(x)$$

2. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\int_a^b f(x) dx$$

3. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\vec{R} = \vec{A} + \vec{B}$$

4. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$AX = B$$

5. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$s = \sqrt{\frac{\sum (x - \bar{x})^2}{n-1}}$$

Section B: Applied Problems

6. Solve a building technology calculation problem involving cost optimization. Show all working and write one technical interpretation. (10 marks)
7. Solve a building technology calculation problem involving load components. Show all working and write one technical interpretation. (10 marks)
8. Solve a building technology calculation problem involving matrix planning. Show all working and write one technical interpretation. (10 marks)
9. Solve a building technology calculation problem involving material-test data. Show all working and write one technical interpretation. (10 marks)
10. Solve a building technology calculation problem involving estimation checks. Show all working and write one technical interpretation. (10 marks)
11. Solve a building technology calculation problem involving cost optimization. Show all working and write one technical interpretation. (10 marks)
12. Solve a building technology calculation problem involving load components. Show all working and write one technical interpretation. (10 marks)
13. Solve a building technology calculation problem involving matrix planning. Show all working and write one technical interpretation. (10 marks)
14. Solve a building technology calculation problem involving material-test data. Show all working and write one technical interpretation. (10 marks)
15. Solve a building technology calculation problem involving estimation checks. Show all working and write one technical interpretation. (10 marks)
16. Solve a building technology calculation problem involving cost optimization. Show all working and write one technical interpretation. (10 marks)
17. Solve a building technology calculation problem involving load components. Show all working and write one technical interpretation. (10 marks)
18. Solve a building technology calculation problem involving matrix planning. Show all working and write one technical interpretation. (10 marks)
19. Solve a building technology calculation problem involving material-test data. Show all working and write one technical interpretation. (10 marks)
20. Solve a building technology calculation problem involving estimation checks. Show all working and write one technical interpretation. (10 marks)

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
