

Civil Engineering

Vectors, Matrices and Engineering Data Analysis

Assignment 1

Instructions: Answer all questions. Show formula, substitution, calculation, units and technical interpretation.

Section A: Formula and Concept Questions

1. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\vec{R} = \vec{A} + \vec{B}$$

2. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$A_x = A \cos \theta$$

3. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$A_y = A \sin \theta$$

4. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$AX = B$$

5. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$s = \sqrt{\frac{\sum (x - \bar{x})^2}{n-1}}$$

Section B: Applied Problems

6. Solve a civil engineering calculation problem involving forces. Show all working and write one technical interpretation. (10 marks)
7. Solve a civil engineering calculation problem involving survey displacement. Show all working and write one technical interpretation. (10 marks)
8. Solve a civil engineering calculation problem involving matrix equations. Show all working and write one technical interpretation. (10 marks)
9. Solve a civil engineering calculation problem involving quality control. Show all working and write one technical interpretation. (10 marks)
10. Solve a civil engineering calculation problem involving statistical judgement. Show all working and write one technical interpretation. (10 marks)
11. Solve a civil engineering calculation problem involving forces. Show all working and write one technical interpretation. (10 marks)
12. Solve a civil engineering calculation problem involving survey displacement. Show all working and write one technical interpretation. (10 marks)
13. Solve a civil engineering calculation problem involving matrix equations. Show all working and write one technical interpretation. (10 marks)
14. Solve a civil engineering calculation problem involving quality control. Show all working and write one technical interpretation. (10 marks)
15. Solve a civil engineering calculation problem involving statistical judgement. Show all working and write one technical interpretation. (10 marks)
16. Solve a civil engineering calculation problem involving forces. Show all working and write one technical interpretation. (10 marks)
17. Solve a civil engineering calculation problem involving survey displacement. Show all working and write one technical interpretation. (10 marks)
18. Solve a civil engineering calculation problem involving matrix equations. Show all working and write one technical interpretation. (10 marks)
19. Solve a civil engineering calculation problem involving quality control. Show all working and write one technical interpretation. (10 marks)
20. Solve a civil engineering calculation problem involving statistical judgement. Show all working and write one technical interpretation. (10 marks)

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
