

Land Survey

Engineering Mathematics I for Land Survey

Assignment 1

Instructions: Answer all questions. Show formula, substitution, calculation, units and technical interpretation.

Section A: Formula and Concept Questions

1. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$d = \sqrt{(\Delta E)^2 + (\Delta N)^2}$$

2. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\theta = \tan^{-1} \left(\frac{\Delta E}{\Delta N} \right)$$

3. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\sin \theta = \frac{O}{H}$$

4. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\cos \theta = \frac{A}{H}$$

5. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\tan \theta = \frac{O}{A}$$

Section B: Applied Problems

6. Solve a land survey calculation problem involving field distances. Show all working and write one technical interpretation. (10 marks)
7. Solve a land survey calculation problem involving coordinate differences. Show all working and write one technical interpretation. (10 marks)
8. Solve a land survey calculation problem involving bearings. Show all working and write one technical interpretation. (10 marks)
9. Solve a land survey calculation problem involving heighting. Show all working and write one technical interpretation. (10 marks)
10. Solve a land survey calculation problem involving control points. Show all working and write one technical interpretation. (10 marks)
11. Solve a land survey calculation problem involving field distances. Show all working and write one technical interpretation. (10 marks)
12. Solve a land survey calculation problem involving coordinate differences. Show all working and write one technical interpretation. (10 marks)
13. Solve a land survey calculation problem involving bearings. Show all working and write one technical interpretation. (10 marks)
14. Solve a land survey calculation problem involving heighting. Show all working and write one technical interpretation. (10 marks)
15. Solve a land survey calculation problem involving control points. Show all working and write one technical interpretation. (10 marks)
16. Solve a land survey calculation problem involving field distances. Show all working and write one technical interpretation. (10 marks)
17. Solve a land survey calculation problem involving coordinate differences. Show all working and write one technical interpretation. (10 marks)
18. Solve a land survey calculation problem involving bearings. Show all working and write one technical interpretation. (10 marks)
19. Solve a land survey calculation problem involving heighting. Show all working and write one technical interpretation. (10 marks)
20. Solve a land survey calculation problem involving control points. Show all working and write one technical interpretation. (10 marks)

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
