

Land Survey

Engineering Mathematics II for Land Survey

Assignment 1

Instructions: Answer all questions. Show formula, substitution, calculation, units and technical interpretation.

Section A: Formula and Concept Questions

1. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\mathrm{Gradient} = \frac{\mathrm{Rise}}{\mathrm{Run}}$$

2. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\Delta E = L \sin \theta$$

3. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\Delta N = L \cos \theta$$

4. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$A = \frac{1}{2} \left| \sum x_i y_{i+1} - \sum y_i x_{i+1} \right|$$

5. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$d = \sqrt{(\Delta E)^2 + (\Delta N)^2}$$

Section B: Applied Problems

6. Solve a land survey calculation problem involving levelling. Show all working and write one technical interpretation. (10 marks)
7. Solve a land survey calculation problem involving traverse computation. Show all working and write one technical interpretation. (10 marks)
8. Solve a land survey calculation problem involving control lines. Show all working and write one technical interpretation. (10 marks)
9. Solve a land survey calculation problem involving area by coordinates. Show all working and write one technical interpretation. (10 marks)
10. Solve a land survey calculation problem involving survey closures. Show all working and write one technical interpretation. (10 marks)
11. Solve a land survey calculation problem involving levelling. Show all working and write one technical interpretation. (10 marks)
12. Solve a land survey calculation problem involving traverse computation. Show all working and write one technical interpretation. (10 marks)
13. Solve a land survey calculation problem involving control lines. Show all working and write one technical interpretation. (10 marks)
14. Solve a land survey calculation problem involving area by coordinates. Show all working and write one technical interpretation. (10 marks)
15. Solve a land survey calculation problem involving survey closures. Show all working and write one technical interpretation. (10 marks)
16. Solve a land survey calculation problem involving levelling. Show all working and write one technical interpretation. (10 marks)
17. Solve a land survey calculation problem involving traverse computation. Show all working and write one technical interpretation. (10 marks)
18. Solve a land survey calculation problem involving control lines. Show all working and write one technical interpretation. (10 marks)
19. Solve a land survey calculation problem involving area by coordinates. Show all working and write one technical interpretation. (10 marks)
20. Solve a land survey calculation problem involving survey closures. Show all working and write one technical interpretation. (10 marks)

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
