

Land Survey

Engineering Mathematics III for Land Survey

Assignment 1

Instructions: Answer all questions. Show formula, substitution, calculation, units and technical interpretation.

Section A: Formula and Concept Questions

1. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$\bar{x} = \frac{\sum x}{n}$$

2. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$s = \sqrt{\frac{\sum (x - \bar{x})^2}{n-1}}$$

3. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$P(A) = \frac{n(A)}{n(S)}$$

4. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$AX = B$$

5. Explain the use of the formula below and identify the meaning of the symbols. (4 marks)

$$e = \text{observed} - \text{true}$$

Section B: Applied Problems

6. Solve a land survey calculation problem involving repeated observations. Show all working and write one technical interpretation. (10 marks)
7. Solve a land survey calculation problem involving measurement errors. Show all working and write one technical interpretation. (10 marks)
8. Solve a land survey calculation problem involving survey adjustment. Show all working and write one technical interpretation. (10 marks)
9. Solve a land survey calculation problem involving quality checks. Show all working and write one technical interpretation. (10 marks)
10. Solve a land survey calculation problem involving probability of acceptance. Show all working and write one technical interpretation. (10 marks)
11. Solve a land survey calculation problem involving repeated observations. Show all working and write one technical interpretation. (10 marks)
12. Solve a land survey calculation problem involving measurement errors. Show all working and write one technical interpretation. (10 marks)
13. Solve a land survey calculation problem involving survey adjustment. Show all working and write one technical interpretation. (10 marks)
14. Solve a land survey calculation problem involving quality checks. Show all working and write one technical interpretation. (10 marks)
15. Solve a land survey calculation problem involving probability of acceptance. Show all working and write one technical interpretation. (10 marks)
16. Solve a land survey calculation problem involving repeated observations. Show all working and write one technical interpretation. (10 marks)
17. Solve a land survey calculation problem involving measurement errors. Show all working and write one technical interpretation. (10 marks)
18. Solve a land survey calculation problem involving survey adjustment. Show all working and write one technical interpretation. (10 marks)
19. Solve a land survey calculation problem involving quality checks. Show all working and write one technical interpretation. (10 marks)
20. Solve a land survey calculation problem involving probability of acceptance. Show all working and write one technical interpretation. (10 marks)

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
