

Building Technology

Engineering Mathematics II for Building Technology

Revision Booklet

Use these questions for CAT, assignment preparation and summative revision.

Formula Recall

1. State where this formula is applied and create one original example.

$$\frac{dy}{dx} = f'(x)$$

2. State where this formula is applied and create one original example.

$$\int_a^b f(x) dx$$

3. State where this formula is applied and create one original example.

$$\vec{R} = \vec{A} + \vec{B}$$

4. State where this formula is applied and create one original example.

$$AX = B$$

5. State where this formula is applied and create one original example.

$$s = \sqrt{\frac{\sum (x - \bar{x})^2}{n-1}}$$

Structured Revision

1. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
2. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
3. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
4. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
5. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
6. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
7. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
8. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
9. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
10. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
11. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
12. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
13. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
14. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
15. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
16. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
17. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
18. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.

19. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
20. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
21. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
22. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
23. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
24. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
25. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
26. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
27. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
28. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
29. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
30. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
31. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
32. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
33. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
34. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
35. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
36. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.

37. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
38. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
39. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
40. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
41. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
42. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
43. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
44. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
45. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.
46. A realistic building technology task involves load components. Formulate the calculation, solve it, and interpret your result.
47. A realistic building technology task involves matrix planning. Formulate the calculation, solve it, and interpret your result.
48. A realistic building technology task involves material-test data. Formulate the calculation, solve it, and interpret your result.
49. A realistic building technology task involves estimation checks. Formulate the calculation, solve it, and interpret your result.
50. A realistic building technology task involves cost optimization. Formulate the calculation, solve it, and interpret your result.

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
