

Land Survey

Engineering Mathematics II for Land Survey

Revision Booklet

Use these questions for CAT, assignment preparation and summative revision.

Formula Recall

1. State where this formula is applied and create one original example.

$$\mathrm{Gradient} = \frac{\mathrm{Rise}}{\mathrm{Run}}$$

2. State where this formula is applied and create one original example.

$$\Delta E = L \sin \theta$$

3. State where this formula is applied and create one original example.

$$\Delta N = L \cos \theta$$

4. State where this formula is applied and create one original example.

$$A = \frac{1}{2} \left| \sum x_i y_{i+1} - \sum y_i x_{i+1} \right|$$

5. State where this formula is applied and create one original example.

$$d = \sqrt{(\Delta E)^2 + (\Delta N)^2}$$

Structured Revision

1. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
2. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
3. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
4. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
5. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
6. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
7. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
8. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
9. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
10. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
11. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
12. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
13. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
14. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
15. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
16. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
17. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
18. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.

19. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
20. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
21. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
22. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
23. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
24. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
25. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
26. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
27. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
28. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
29. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
30. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
31. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
32. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
33. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
34. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
35. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
36. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.

37. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
38. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
39. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
40. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
41. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
42. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
43. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
44. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
45. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.
46. A realistic land survey task involves traverse computation. Formulate the calculation, solve it, and interpret your result.
47. A realistic land survey task involves control lines. Formulate the calculation, solve it, and interpret your result.
48. A realistic land survey task involves area by coordinates. Formulate the calculation, solve it, and interpret your result.
49. A realistic land survey task involves survey closures. Formulate the calculation, solve it, and interpret your result.
50. A realistic land survey task involves levelling. Formulate the calculation, solve it, and interpret your result.

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
