

Building Technology

Engineering Mathematics I for Building Technology

Trainer Guide - Keep Private

This guide gives marking expectations. Do not upload publicly if learners should not access marking guidance.

Marking Guidance

- Formula selection: 1-2 marks.
- Correct substitution: 1-2 marks.
- Accurate computation: 2-4 marks.
- Correct units: 1 mark.
- Technical interpretation: 1-2 marks.

Expected Response Pattern

1. For roof pitch, the learner should identify the known values, select a valid formula, substitute correctly, compute accurately, and explain the answer in building technology context.
2. For stair gradients, the learner should identify the known values, select a valid formula, substitute correctly, compute accurately, and explain the answer in building technology context.
3. For excavation volumes, the learner should identify the known values, select a valid formula, substitute correctly, compute accurately, and explain the answer in building technology context.
4. For cost curves, the learner should identify the known values, select a valid formula, substitute correctly, compute accurately, and explain the answer in building technology context.
5. For construction graphs, the learner should identify the known values, select a valid formula, substitute correctly, compute accurately, and explain the answer in building technology context.

References and Learning Sources

These learner materials are original notes prepared for Mr Mwirigi Mathematics Training Hub. The topic sequencing and level are informed by standard engineering mathematics references and the uploaded curriculum/OS materials. No textbook pages or solution-manual pages have been reproduced.
